## PROTEASE-ACTIVATED RECEPTOR PAR4 (ZCHEMR2)

## ABSTRACT OF THE DISCLOSURE

The present invention relates to polynucleotide and polypeptide molecules for PAR4, a novel member the protease-activated receptor family. The polypeptides, and polynucleotides encoding them, mediate biological responses and/or cellular signaling in response to proteases. cleavage of PAR4 exposes a PAR4 extracellular amino terminal portion that serves as a ligand for the PAR4 receptor. may be used as a target in drug screening, and further used to identify proteinaceous or non-proteinaceous PAR4 agonists and antagonists. The present invention also includes antibodies to the PAR4 polypeptides.
